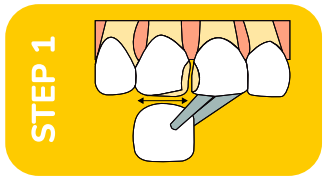
KIDS-E-CROWNS - INSTRUCTIONS FOR USE

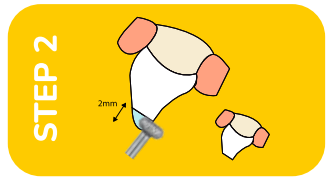
INTENDED USE and INDICATIONS: Kids-e-Crowns are designed for full coverage restoration of damage or decayed teeth

anterior technique



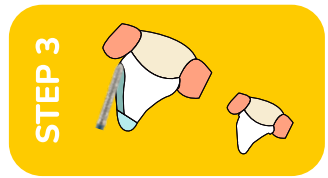
CROWN SELECTION

- Choosing appropriate size of crown using mesio distal width



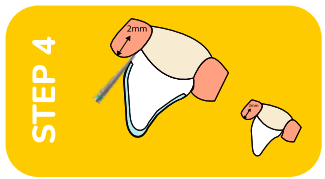
INCISAL PREPARATION

- Cut 1.5 to 2mm incisal edge



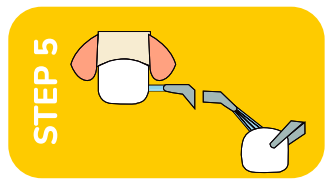
SUPRAGINGIVAL PREPARATION

- Create a chamfer margin all around the tooth by reducing 0.5 - 1mm



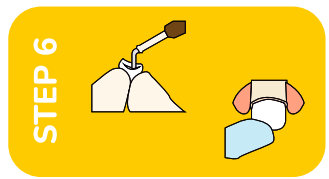
SUBGINGIVAL PREPARATION

- Remove chamfer margin extend 2mm subgingivally without ledge formation



CHECK FIT & PREPARATION

- Round off line angles
- Crowns should be passive fit
- Clean crown with alcohol and water
- Control Bleeding



CEMENTATION

- We recommend Glass Ionomer Cement
- Cement using light finger pressure
- Remove Residual cement

CAUTION: **CROWNS CEMENTED FOR INTRAORAL SERVICE should NOT be cleaned and sterilized to use for another patient**

PRECAUTION:

- Crowns that are reprocessed after cementation in another patient may cause infection resulting in possible long term health effects.
- Dental crowns may cause artifacts in MRIs, MRI technician should be notified of any dental crowns.

STORAGE:

Crowns should be stored in a clean storage container.
